

New MetroCount Support for Multiple Languages

Special information for the MetroCount 5600 Vehicle Classifier System and Traffic Executive software v3.x

To satisfy requirements of recent successful international tenders, MetroCount now supports many languages (see box). A significant revision of our Traffic Executive Windows Software is now available that provides this support via associated language tables.

Conduct Field Survey Operations in Many Languages

Traffic Executive's MCSetLite module for the Pocket PC now has full language support. All menus and dialogs can appear in a variety of languages. All field survey operations, including installing, starting and monitoring your MetroCount 5600 Series Roadside Units can be performed by field staff in any convenient language!

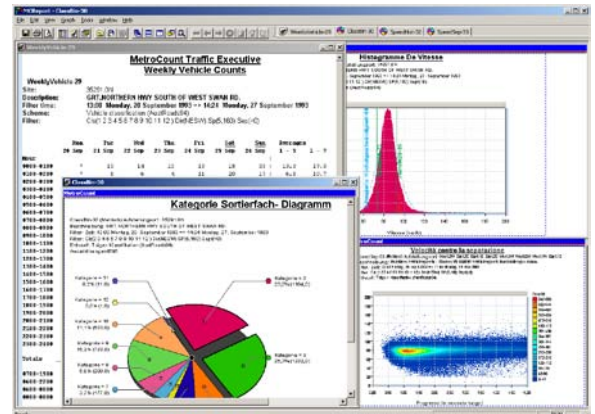

MCSetLite running on a Pocket PC with Turkish language settings.

Operating your MetroCount units could not be any easier! MCSetLite's intuitive interface is very quick to learn. And, with your MetroCount units only storing individual axles, there are no difficult survey parameters to set. Decisions about speed bins, time intervals, class schemes, etc are not required – this is MetroCount's basic philosophy – giving you the efficiency advantage and rapid deployment!

Generate Reports in Many Languages!

For all your office-based traffic analysis, Traffic Executive's incredible MCRReport software supports full localisation in ALL reports and output. While some aspects of the software (i.e. menus, dialogs) are still in English – ALL your reports will appear in the selected language! All local cultural changes such as dates, compass points and the decimal and list separators are fully supported.

MCRReport supports many languages. Your computer's Regional Settings and Traffic Executive's available language tables allow you to display reports in different languages.

With this new multi-language feature, you can communicate all your traffic engineering findings from MCRReport in a variety of languages. And, being Windows-based, your MCRReport output is easily transferable to other applications (e.g. Word, Excel, Access, etc). With MCRReport's stunning graphs and charts, and many comprehensive tables, you will be off to your urgent meeting in no time – no translations required!

How Does it Work?

English is no longer the default language of our Traffic Executive software. Cultural support in MCRReport and MCSetLite is instead based on the regional settings of your Windows Operating System. Therefore, the language used is dynamic and can be changed at any time, provided that you have the correct language tables.

If you change the locale of your computer, the screen presentation changes when redrawn (e.g. with ReCalc). MCRReport will dynamically change your reports from, say, Turkish to German.

With this ultimate language flexibility, it is possible to set up a survey program in France, conduct your surveys in Italy and then process the results in Germany, with none of the people involved noticing any language-related changes! Complex issues such as decimal separators are handled transparently.

Do You Want to Operate MetroCount Systems in Your Language?

If so, then contact MetroCount immediately! We may already have support for your language. If not, we will provide a translation table that you can edit to suit your cultural requirements. When approved, this language table can be digitally signed by MetroCount and returned ready for use.

MetroCount Traffic Executive Software can support many languages. Languages not currently supported, however, include those using script characters, complex glyphs or those reading from right-to-left.

Contact MetroCount to find out whether we are able to support your particular language requirements.
